Pond & Lake Aeration Systems & Supplies

Natural Pond & Lake Products

***The Most Concentrated & Effective
Bacteria & Colorant Products Available Today!***

MicroLife Clear™ All Natural Bacteria & Barley Straw

This product is an all natural formulation of beneficial pond bacteria and barley straw for use in ponds & lakes, aquaculture ponds, ornamental ponds, koi ponds and water garden ponds. Apply this all season product around the edges of the pond when water temperature is above 55 degrees Fahrenheit (F). When used regularly, this product will reduce murky water (improve water clarity); reduce ammonia, nitrate, nitrite and phosphorus; reduce bottom sludge (muck); and reduce odors. Apply 6 to 8 packets per surface acre every 2 to 4 weeks.

MicroLife Clear 50™ - Contains 50 eight-ounce dissolvable packets

AquaSplash Blue™ SC Super Concentrated Pond & Lake Colorant

This product contains a concentrated blue lake colorant designed for use in ponds & lakes. This colorant helps to filter out sunlight and to create an aesthetically pleasing "blue" appearance to the water.

This colorant will not stain fish, birds or plants when used as directed. This quart bottle will treat an entire surface acre of water up to 4 to 6 feet deep every 2 to 4 weeks.

AquaSplash Blue™ SC - 1 quart (32 oz.) of super concentrated dye

 **MICROLIFE CLEAR™**
All Natural Bacteria & Barley Straw Treatment

 **AquaSplash Blue™ SC**
Super Concentrated Pond & Lake Colorant

More About These Products...

MicroLife Clear is our unique blend of all natural bacteria and pulverized barley straw for ponds and lakes. Our all season formulation contains Bacillus bacteria cultures specifically chosen for their ability to grow quickly, withstand multiple environmental factors without easily dying off and for their ability to produce the types of enzymes needed to break down wastes found in ponds and lakes. There was a scientific approach used in determining which organisms to use, but the real proof has been their effects after using it in ponds and lakes.

MicroLife Clear contains five different, specially selected species of Bacillus bacteria that work in ponds and lakes with pH values ranging from 4 to 10. All five species are facultative anaerobes. Basically they can live and feed with and without oxygen. However, that doesn't mean they work at the same efficiency in both environments. The fact is that they are much more efficient with oxygen as are all bacteria. Our bacteria are **extremely effective** in removing sludge layers in ponds and lakes and improving water clarity throughout the entire water column and at the water's surface.

MicroLife Clear contains *real* barley straw as an added bonus. Barley straw is first pulverized into a very fine powder, mixed together with our special blend of bacteria and packaged in dissolvable packets. These dissolvable packets allow for our product to be quickly and easily applied to ponds and lakes.

AquaSplash Blue SC is our brand of super concentrated blue colorant for ponds and lakes. It is one of the most concentrated pond and lake colorants on the market today! This means you will use far less colorant over the season when compared to other products. The contents of a single bottle (32 fl. oz.) will treat an entire surface acre (up to 4 to 6 feet deep) depending on the color of blue desired. Add to multiple spots around the edges of the pond or lake. Repeat monthly or as needed to maintain the desired color of blue. The use of an aerator or fountain can help mix the colorant throughout the pond quickly and easily. This product is compatible with most other pond and lake treatment products and will not stain fish, plants or other wildlife when used as directed.

The performance of our **MicroLife Clear & AquaSplash Blue SC** products is **enhanced with pond and lake aeration**. Hydro Logic Products carries a full line of aeration systems and water fountains in order to meet your pond and lake management needs.

Hydro Logic Products offers two different product lines to aerate your pond or lake. The **AirLift™** series can be installed in ponds and lakes with water depths up to 35 feet.

Conversely, the **AirLift XL™** series is typically installed in deeper ponds and lakes with water depths ranging from 15 to 35 feet.
